DETAILED ACTION

Drawings

The drawings are objected to because Figure 5 shows "yes" and "no" in the second level of steps reversed. Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as "amended." If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either "Replacement Sheet" or "New Sheet" pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, 7, 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Binder, US Patent No. 5,892,408.

Regarding Claim 1, Binder discloses in Figure 4 a self-calibratable oscillating device, comprising:

a phase comparator (48) being comprised of a first input port (left input arrow, from 47), a second input port (right, from 41) and an output port (output of 48); a clock pad (is necessarily present in the thing described in the reference, the left input arrow) electrically connected to the first input port (left input arrow); a crystal oscillator (41) electrically connected to the second input port; an analog/digital converter (43, via 46) electrically connected to the output port of the phase comparator (48); and a memory (44) electrically connected to an output end of the analog/digital converter (43).

Regarding Claim 2. Figure 4 shows a temperature-compensated crystal oscillator (VCXO that is temperature compensated).

Regarding Claim 7, Binder discloses in Figure 4 a system bus (arrows); an embedded CPU (46); system memory (44); a clock pad (is necessarily present in the thing described in the reference, the left input arrow) for receiving a reference clock (47); a phase comparator (48); an a/d converter (43). It is noted that preamble recitations are mere statements of purpose or use.

Regarding Claims 10-13, Figure 2 shows a plurality of oscillating devices in parallel and Figure 4 shows signal detector 49 producing an activation signal and

frequency processor and discriminator 48, and among other things, which would necessarily perform the method as recited in the claims.

Allowable Subject Matter

Claims 3-6, 8 and 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: the best prior art of record, Binder, taken alone or in combination of other references, does not teach or fairly suggest the location of switches as set forth in the claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Yerbury et al. discloses self-calibrating temperature compensated oscillator.

Ma et al. discloses digitally temperature compensated VCO.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Chang whose telephone number is 571 272-1759. The examiner can normally be reached on Mon-Fri 0700-1730.

Application/Control Number: 10/728,382

Art Unit: 2817

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on (571) 272-1769. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
